

# The onepagem package\*

Mike Piff†

28 Mar 1996

If the document has only one page, omit page number. (onepageempty)  
The page number must be produced by means of `\thepage`. Needs  
two passes through L<sup>A</sup>T<sub>E</sub>X to work, as it writes to the `.aux` file.

The first version was a joke put on CTAN to illustrate how useful  
`\AtEndDocument` is. This one works...

---

\*This manual corresponds to `onepage.sty` v1.01a, dated 28 Mar 1996.
